

Geometry and Plato

Monday, June 29, 2020

Let no one ignorant of Geometry enter here.

Plato was a genius which means that people of less intelligence more often than not assume that they can comprehend his work when they provably cannot.

Comprehension is directly proportional to intelligence and intelligence is proportional to the principles of language which are functionally resident in a mind as grammar systems. Plato was a grammar teacher who taught Dialectic. Being a Dialectician was, as Plato noted, the trade of a Philosopher.

What does Dialectic mean?

Dialectic means speaking by two's, or in more modern terms, binary information processing.

One of the qualifications for entering Plato's Academy was Geometry. Posted above the door of the Academy was a sign: Let no one ignorant of Geometry enter here. Why was that? It is because, in order to speak logically about grammar, one has to have a lot of experience with geometry because geometry is a pure analog binary grammar.

How many people do you know who claim to be able to teach Plato while at the same time demonstrate a mastery of geometry. Compare my works in geometry with theirs. The links to my work are posted in the description of this video.

Take a straightedge and pencil and draw a simple segment. This action by your own hand should produce in the perceptible and in the intelligible in the mind the definition of just one thing; a thing which can be paired with many logical names. Some examples are;

1. Stop, go, stop.

2. Container and contained.
3. Correlatives and relative.
4. A unit.
5. A thing.
6. 1.
7. Noun and verb, etc.

Every possible grammar is a method of using binary recursion in order to perform the biological function of a mind. A mind is a life support system of the body. Therefore, binary recursion is, as a true Philosopher recognizes, the path to salvation by biological fact. Therefore, a true philosopher teaches the biological function of a mind by teaching binary recursion and how it is used for survival. Geometry allows one the ability to construct virtual things, while logical systems allow you to learn and apply logical grammar systems to it which will produce every logical result of that analog. This is called modeling. When you understand this, you will understand that my Basic Analog Grammar Sample Dictionary now stands at over eleven thousand pages and how with just a simple segment, you can produce every possible logical operation, even what is called every mathematical process. It is a form of grammar many have tried to find in history, even Plato himself, but failed at producing.

Plato can be said to have put psychology into the vernacular of Science and founded psychology on biological fact in the concise as; Psychology is commensurate with the principles of Language which are functionally resident in the mind as binary grammar systems.

There is another historical source, which put these facts about binary and its use for survival into another historical work which was produced by intelligence even greater than Plato's. I will introduce that work in terms of a well known social metaphor: Adam and Eve were a Conjugate

Binary Pair who, by complete induction and deduction, i.e. recursion, produces the human race.

Where Plato used as a metaphor one man, Socrates, the Bible uses metaphor of Adam and Eve, mankind. Most do not know that Socrates had two wives, Xanthippe and Myrto, just like a mind also has two concepts to master, the absolute and the relative, noun and verb.

Today there are mainly two factions, neither of which are literate enough to even read and may be broken down roughly as a distinction between religion and science. Both factions have had authors they can refer to, both works claiming that binary recursion is the salvation of man which is very provable because as the computer demonstrates, grammar systems are for memory management and memory is to be used by recursion or what can be said as predictive behavior. Yet neither faction has ever produced a grammar book exempling how binary recursion is the foundation of all information processing, not even after science produced the computer does it demonstrate the intelligence to see the implication.

Predictive behavior has many names, itself; thought, reasoning, judgment, rationality, philosophy and even prophecy. Yet today, both factions, religion and science, even what is called philosophy, is not more than a bunch of mentally lame individuals too stupid to learn and teach, simple binary recursion to produce every possible system of grammar so that people can function to the best of their own ability. In short, people who are too stupid to realize that teaching humans is not like teaching dogs or parrots, or even using a computer to mimic.

Grammars are produced by standards of mental and physical behaviors neither of which are standardized today. Both Plato and the writers of the Bible recognize a fact; when a mind cannot do its biologically defined job, that mind is not maintaining and promoting life.

All of my work, which I post for free world-wide distribution, is also wholly aimed at a mind doing its own work in order that someday, the mind of man will evolve to do that work. My work also is based on the fact that every possible grammar is a method of binary recursion. What I add to the study of grammar is along the lines of the analog grammar of geometry. I show how to accomplish with geometry how to draw computers which yield exact results using absolutely no processing time. In short, geometry, as an analog system of grammar, can metaphor even the relative difference of time independent of the computation, or in real time: The output of computation is concurrent with the input.

My work too, cannot be comprehended by the simple minded, no more than Plato, or the authors of the Bible can be comprehended.

The ability to understand grammar is afforded by evolution. Grammar systems can only allow one the ability to take advantage of the degree of intelligence afforded to them by evolution. And as any thing else, you cannot know how much of a human being you can be, unless the desire to know what you are, why you are, along with the ability to master those lessons in terms of binary recursion, is the motive to study and examine your self, or in short, one is not driven by self flattery nor by humility alone, but by being smart enough to formulate a push pull system of motivation.

The relationship between body and mind is put into the Biblical metaphor of the mark on the brow and the mark on the hand, even the mark of the beast. In scientific terms, the mind is designed to regulate human behavior. In geometry you practice it in the simple, learning how to master the hand to learn how to think.

Today, people are so illiterate they just stick words together, wholly unaware of what they are thinking and saying is pure gibberish, not even smart enough to know that Language is a biological given, an intelligible which is not perceptible at all. Grammars are attempts to take advantage

of Language to do one's biologically defined job, but, as observed, people are too stupid to examine and try to master it. This is why there are no correct grammar books today.

The binary recursion of Language produces by provable fact, four distinct groups of grammar; Common Grammar, Arithmetic, Algebra and Geometry. Thus there are three logical systems of grammar and one analogical. A mind functions, when it functions, using this grammar matrix. The grammar matrix affords a mind the ability to get the most out of memory while affording redundancy and cross-verification of reasoning: In the metaphors of the Bible, at the mouth of two or more reliable witnesses.

Every product of a biological is a biological derivative. Grammar systems are biological derivatives, but today, simpletons believe that they can reinvent grammar or even language itself.

A thing is a standard of behavior. Standard is to limit as behavior is to the material difference within those limits; therefore, as a mind is responsible for standards of behavior, a mind is responsible for binary recursion. Think about that if you can. If you cannot get it, then you are not.

Both prophet and philosopher, by factual definition are synonyms, but only to those intelligent enough to be able to standardize their own mental processes to some degree. However, no matter which term you choose to use, we do not become the single word of Man, until we have achieved a cusp point in evolution, a time when one both recognizes what we are suppose to be and can use it to measure, judge, our self.

We, as a life support system of the body, simply have to learn to say what we see in order to maintain and promote life. As every product of a computer, every thing that they can do, is a product of binary recursion, so too every behavior we effect with our own body.

So, if you can wrap your mind around it. It was written, thousands of years ago, that someone would arrive in history showing how the end is the beginning, twice. I show it not only for religion, but also for science. I show it not only logically, but also analogically by showing how to draw a perfect computer with just my own hand but you will never see it, until you see it for yourself for as I said, only evolution, God, can give you eyes.

Binary recursion always produces a binary result. The yeas and nays of mankind will, someday, be yeas and nays. There is, as the ancient Greeks claimed, as the Bible claims, no third man, or non binary result.

Today, those who claim that there is such a thing as Artificial Intelligence, are too stupid to realize that you can make a computer, and load that computer with grammar systems, and data, but unless you tell that computer what to do, it will not do a thing. It is not motivated at all to do anything more than what it is told to. Programmers are faking the result by obfuscating code which will ultimately only produce what it is told to do. Intelligence does not take an adjective. Nouns coupled with verbs are not nouns. Subjects, which are nouns, are equated to nouns and verbs which only designate a unit of recursion. Thus, a predicate which some believe is a noun is the product of someone who is illiterate. Artificial Intelligence is not a noun, but a predicate which also means, not intelligent.

A mind is designed for the recursion of life, not for mental masturbation or masturbating with a glorified toaster. However, the perversion of a life support system of the body does fit very well in the survival of those who are fit and the destruction of those who are not; in short, the ability to think in accordance with the truth of things.

And so, the path to comprehension rests upon our mastery of grammar systems, which is demonstrated by our ability to master our behavior

starting with just our own hand in geometry. Education in both science and religion has absolutely nothing to do with parroting bull-shit.

Manufacture all the computers you like, not one of them will ever be motivated to mastering its own behavior, but like a dog or a parrot will require someone else to tell it what to do and in today's social environment, it means some sociopath trying to get you to do tricks for them, your slavery. This is wholly contrary to: You shall know the Truth and the Truth shall set you free. That freedom is also biologically defined and also in the metaphors of the Bible, death and hell, what else is a life support system for but salvation of our soul, or mind?

Plato stated in the *Phaedrus*, that his intention of the dialog format was for the preservation of the science of dialectic, for try as he did, he could not complete the grammar matrix, could not become the finished product he sought to achieve. This is true of us all at this time in our evolution, but we do know, if we are smart enough, where we have to go in order to be what we are intended to be, tenders of the Garden of Life and we do know how to aid in that evolution, mastering, as found in the Bible, the hand in order to help teach us as mind; in short, standards of behavior in body and mind. Standards of Behavior is a simple Binary expression.

Those who draw computer circuitry today are apparently too stupid to use simple geometry to draw it. Perhaps my work will help them with that if they can get an inoculation against that gibberish called non-Euclidean Geometry. This means that they will have to comprehend that non-Euclidean Geometry only means the recursion of a unit which is not a unit, gibberish is gibberish. Euclidean Geometry only refers to the Geometry demonstrated in the works of Euclid, it does not mean a unit is different from itself. A better name for non-Euclidean Geometry is Occult Geometry, Geometry as taught by illiterate mystics.

Pairing the Logical with the Analogical, is part of teaching of the Bible, Plato, and Euclid, also, your own biology and you have to be very *special* not to comprehend it as fact.

Your own body, by biological fact is saying, you cannot live without geometry, perceptibly and intelligibly, or again as the standardization of the behavior of a life support system. Every correct grammar book will present grammar as a grammar matrix, how binary is used recursively to formulate those grammar systems and how to say the same things in all four. To date, this has not even been conceived by mankind and why I am introduced to man so that introduction has help to becoming a reality.

Binary recursion is a biological fact: a life choice is factually illiteracy.
